But football's not the only sport we cover on the weekend - we also provide weekend tips for the biggest American sports like MLB, NBA, NFL, NHL and UFC. To be sure, part of Amazon's turnover issue relates to how some employees view working in a warehouse as a brief pit stop on the way to better things. But some workers have long complained of stresses unique to Amazon's workplace, from the pace and repetition of the labor to the unrelenting computerized surveillance of workers; every move to comparatively high injury rates. In a company survey of 31,000 workers who left Amazon that was referenced in the report, some former Amazon workers say it's worse to work at Amazon than some big-name competitors like Walmart or FedEx. In that survey, those who joined another employer soon after leaving the tech giant "rated Amazon significantly worse on work fitting skills or interests, demands of the work, shift length and shift schedule."

Turnover in the US retail industry was slightly higher than that - 58 percent and nearly 70 percent respectively in 2019 and 2020 - but still only about half as bad as Amazon's. The high rates of attrition "made some [Amazon] executives worry about running out of workers across America," the New York Times reported in 2021, though the article did not include specific timelines.

Of course, Amazon could also simply reduce the number of workers it needs by speeding up automation in its warehouses - a controversial approach. Nonetheless, the report revealed that Amazon executives had already in 2021 set a "conservative" goal of improving warehouse productivity by 25 percent by the end of 2024, strictly through increased automation. Hitting that goal on its own would push back the labor crisis as well, but only slightly.
